

Attachment for steering gearboxes JRM482, JRM484, JRM485, JRM486, JRM491, JRM496, JRM584, JRM7491, JRM7584

Due to a change in the series production, the steering gearboxes mentioned above have two different types of attachment threads - M12x1.25 and M12x1.75. For this reason, the thread pitch of the steering gearbox must be checked before installation. To check this use a thread gauge or turn the bolts by hand into the thread. The bolts must turn several times without using any specific force.

**Note: Using the wrong bolts will lead to the destruction of the steering gearbox!
When replacing a steering gearbox TRW generally recommend the renewal of the attachment bolts.**

Bolt M12x1.75
Ford OE number: 1774878
Fiat OE number: 51915330

Bolt M12x1.75
Ford OE number: 1675335
Fiat OE number: 51856874
