Tips and tricks	Procedure
Each time that the brake caliper is replaced, we recommend a check on the basic settings afterwards.	<p>Please adjust the basic settings as follows:</p> <ol style="list-style-type: none"> 1. Disconnect the handbrake cable 2. Turn the pistons clockwise under heavy pressure using a special tool until they stop 3. Unscrew the pistons anti-clockwise by half a rotation 4. Fit and bleed the brake calliper 5. Check whether the handbrake lever has gone as far as it will go on the casing of the brake calliper. 6. Press the foot brake hard around 30 times with the engine running 7. Adjust the handbrake in accordance with the vehicle manufacturer's specifications 8. Check the effect of the service and parking brakes on the test bench
