## Technical Bulletin R1

Issued: 2007-03-27

### CITROEN C4 , PEUGEOT 307

VKBD that comes with already mounted ABS ring

There are 3 different cases when it comes to VKBD and ABS. VKBD 1011 belongs to case 1.

In general the following cases are possible:

**Case 1:** In some VKBD kits, where an ABS ring is needed, this is already included and mounted on the disc or drum in question. **See below for concerned models for VKBD 1011.**

**Case 2:** When the new disc or drum in the kit does not have any ABS ring but the old disc / drum on the car has one; this is when the old ABS ring has to be reused, i.e. dismantled from the old brake disc and mounted on the new brake disc. See mounting instruction included in the kits.

**Case 3:** No ABS ring is needed at all because the vehicle does not have it or it is mounted on some other part like the CV joint for example.
